ENRICHMENT

Cathy's mom is a teacher and her dad is a doctor. They are always at work or sleeping, so their house is always a huge mess. There are a ton of boxes, mostly filled with worksheets and tests that couldn't fit into Cathy's mom's office. One day Cathy had a ton of homework to do, so she invited her classmate and friend Dave to come over. While they were doing their homework together, Cathy realised that she has a book that could really help them. They were searching the boxes, when Dave suddenly saw a box titled "For the future". Inside there was a map with a marked location deep inside the woods. Cathy and Dave wondered what could be there and tried to find more hints, but they were unsuccessful. They concluded that the only way to solve this mystery is to try to find whatever is hidden there. They figured out that it's most likely hidden, so they also picked up a shovel and embarked on a journey.

When they arrived and started digging, the shovel suddenly hit ~~the~~ something hard. They pulled it out and opened it. Inside there was a 8 terabyte Seagate Barracuda HDD. They brought it home and put it into their computer. Joy suddenly filled the room. The 8 terabyte Seagate Barracuda contained 348 Bitcoins, which they immediately exchanged for over 27 million British Pounds.
